

Ten Residential Energy Savings Tips

- 1.** Lighting – Switch to LED. Savings can be over \$100 per year per dwelling
- 2.** Use Advanced Power Strips
- 3.** Water – be aware of consumption and pricing
- 4.** Laundry – use only cold water
- 5.** Window Coverings - consider all your options
- 6.** Make sure air vents are open and getting air flow
- 7.** Use Energy Star Appliances
- 8.** Use fans to circulate air. A fan costs one penny per hour vs air-conditioning cost of .36 cents per hour.
- 9.** Replace/install landscaping that reduces energy consumption and is geo-appropriate.
- 10.** Install programmable thermostats and high efficiency air-conditioning units. Together this can reduce energy usage by 20-50%
